The second international conference on integrative practices for planning, designing and operating mines that deliver long-term beneficial environmental and social legacies

THE CONFERENCE
Building on the success of the inaugural Life-of-Mine 2012 Conference, held in Brisbane, The AusIMM will host the second event on this highly topical series during 16-18 July 2014 in Brisbane, Australia.
The integrative approaches and themes covered in the first event will be expanded for 2014 to attract and engage a broader range of professional disciplines. Delegates from industry, government and research areas will join to share practical experiences from across the mining life cycle: from exploration and prefeasibility stages, to mineral extraction and processing phases, and the post-operational closure era.

WHO SHOULD ATTEND
Chief Executive Officers, Directors, Managers, Engineers, Scientists, Practitioners, Advisors, Researchers, Government Officers, Consultants and Students of:
- Corporate Social Responsibility
- Sustainability
- Environment
- Global development
- Strategic development

Policy and regulation
- Mine planning
- Operations
- Closure planning

SPONSORSHIP & EXHIBITION OPPORTUNITIES
Showcase your business at the conference and register your interest in sponsorship today! The sponsorship and exhibition package contains a variety of levels from principle sponsorship through to conference supporter. A trade exhibition will be held in association with the event and will provide an excellent opportunity for companies to display their products and services to the participants.
Should you wish to discuss opportunities, develop a package to suit your budget, or if you have any enquiries, please do not hesitate to contact Event Management.

EVENT MANAGEMENT: The AusIMM
For all enquiries including sponsorship, exhibition, tour and workshop opportunities please contact:
Tara Hicks, Coordinator, Events, The AusIMM

Co-host
AusIMM
Centre for Mined Land Rehabilitation

Society and Communities
- Social and health impacts on communities
- Social closure and socio-economic developments
- Mine rehabilitation – changing community expectations as drivers for change

Global trends
- Life-of-Mine planning, rehabilitation and protecting the social licence to operate
- Land access constraints – drivers, global trends and implications for resource extraction
- Food security – challenges and requirements for the co-existence of mining and agriculture
- The convention on biological diversity – national obligations and the implications for mining
- Water – too much or too little and issues for the mining sector
- Practical ways to foster co-existence between mining and agriculture through improved rehabilitation and stakeholder engagement
- Responding to a changing climate

CALL FOR PAPERS – DEADLINE 11 NOVEMBER 2013

Abstract submissions

The organising committee call upon submissions incorporating but not limited to the following themes. Case studies and recent experiences will be viewed favourably:

Strategies and Planning
- Integrating engineering and science to minimise operational and closure risks
- Mine and rehabilitation planning for closure and beneficial end-uses
- Mine waste management and modification to maximise rehabilitation
- Closure and water resources

Innovation
- Opportunities for positive environmental outcomes through innovation
- Case studies on innovative design for implementation of long-term waste management
- Technology developments to achieve long lasting life-of-mine benefits
- Deploying remote sensing and other GIS-related technologies to improve monitoring and measuring rehabilitation performance

Society and Communities
- Social and health impacts on communities
- Social closure and socio-economic developments
- Mine rehabilitation – changing community expectations as drivers for change

Global trends
- Life-of-Mine planning, rehabilitation and protecting the social licence to operate
- Land access constraints – drivers, global trends and implications for resource extraction
- Food security – challenges and requirements for the co-existence of mining and agriculture
- The convention on biological diversity – national obligations and the implications for mining
- Water – too much or too little and issues for the mining sector
- Practical ways to foster co-existence between mining and agriculture through improved rehabilitation and stakeholder engagement
- Responding to a changing climate
